DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1, 2, 4 – 9, 27 – 33, drawn to an embedded memory system integrated into a single chip with a microprocessor with a power management arbiter that includes an order block to order requests according to status of requests and priority information, classified in class 711, subclass 158.
 - II. Claims 10 – 15, 17 – 26, drawn to a memory system with non-volatile a memory block, a power arbiter to provide charge pump sharing, a code port, a data port, and an FPGA port, classified in class 711, subclass 100.
 - III. Claims 34 – 40, drawn to an embedded flash memory system having a modular array structure with a shared power block, and a testability circuit block with analog I/O pads for external test equipment access, classified in class 714, subclass 25.
2. Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as in a system that does not require three separate ports required by subcombination II or in a system without a testability circuit block needed by subcombination III. Likewise, subcombination II can be used in a system that does

Art Unit: 2189

not order requests or in a system without any testability circuit block as needed by subcombination III. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

4. The Examiner notes that claim 19, while indicated as being allowable, contains the same defect as the cancelled claim 3. Because Applicant had fair notice of the defect, claims 19 and 20 can be finally rejected under 35 USC 112, second paragraph (same ground as claim 3) if not amended to correct the problem in Applicant's next response.
